

Chameleon

Security Made Easy

Like a key for your computer, the Chameleon protects your information with full AES-256 encryption. Plug in the Chameleon to access your files. Unplug it to secure them. No passwords to remember or hide. The Chameleon guards your data even if Windows is not password protected.

Secure

- 🔒 Full AES-256 encryption - the encryption standard used by the U.S. Government and major corporations.
- 🔒 Hardware cipher hides your files from key-loggers, spyware, malware, trojans, and hackers.
- 🔒 Standalone operation. Unique cryptographic keys can be generated by the Chameleon itself.
- 🔒 Automatically encrypt files and folders for cloud storage.

Convenient

- 🔑 USB plug and play functionality.
- 🔑 Stop accidental lockouts and data loss with master key management.
- 🔑 Windows remains fully functional without the Chameleon plugged in.
- 🔑 Backup your encrypted files without the Chameleon plugged in.
- 🔑 All data stays in the PC. It is recoverable if the Chameleon is lost.
